

RTS Custom Molded Products

RTS has an experienced, full-service engineering group. Using our advanced Mechanical Desktop/AutoCAD 2002 design software we will confidentially create custom toolings and molds for any of your products. We have a large variety of proprietary, customer-owned molded products for a variety of markets.

Profile

RTS polyethylene tanks are Ontario manufactured to strict ISO 9002 quality guidelines to ensure years of customer satisfaction. Impact-resistant, non-corrosive, one-piece seamless linear polyethylene construction allows RTS tanks to be used for the storage of most industrial chemicals including a wide range of herbicides and fertilizers. RTS tanks are manufactured using food grade approved resin to ensure safe storage of potable water. With nearly 30 years rotational molding experience, and computer directed roto molding machines RTS is able to combine quality product and competitive price to meet the challenges facing the agricultural market.

Mission Statement

We commit to supplying value to our customers, through provision of acceptable, consistent quality products, delivered on-time, that meet or exceed our customer's expectations. We wish our customers to view RTS as a responsive, innovative, dependable, successful supplier.

History

1872

Canbar was founded as a manufacturer of high quality wood stave barrels for storing and shipping whisky and dry goods. The original business evolved over the decades into the manufacture of wood stave tanks and pipelines and later into the production of rotationally molded products.

Recently Canbar sold its plastics division and has changed its name to RTS Plastics Incorporated. From our state-of-the-art rotational molding facility in Waterloo, Ontario and our US Distribution center in Georgia, RTS Plastics continues the tradition of producing high quality plastic products. With computer directed molding machines operated by trained personnel, RTS manufactures custom and proprietary molded plastic products.

RTS' rotational molding experience is applied to a wide range of plastic products including:

- tanks
- material handling containers
- process containers
- machine and equipment housings
- playground equipment
- custom product needs
- hazardous chemical containment

PRODUCTS AND SERVICES:

- Drawings and Specifications
- Mechanical Desktop
- 3D Solid Rendering
- AutoCAD 2002
- Quality Control-Quality Assurance

- Molded-in Inserts and Graphics
- Assembly
- Spin Welding
- U.L., U.N., C.S.A. Certification

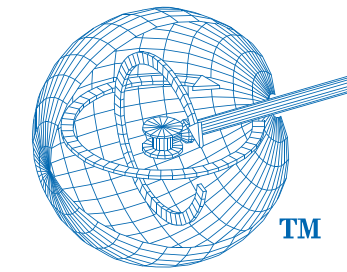

TERMS AND CONDITIONS:

A full statement of terms and conditions is available from RTS Plastics Incorporated. Please contact RTS customer service for further information.
